

AVH markers

unc-42

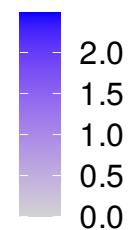

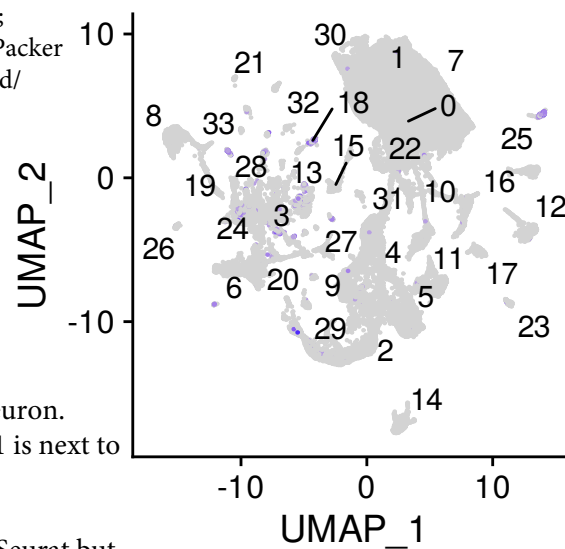

lin-11 identifies AVA_AVE; AVH;
AVJ; PVP in Packer L2 list and
AVG; AVH; AVJ; DVA; PVP;
PVQ_and_possibly_PVC in Packer
Emb list, so maybe isn't a good/
unique marker in L1

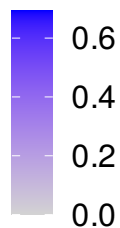

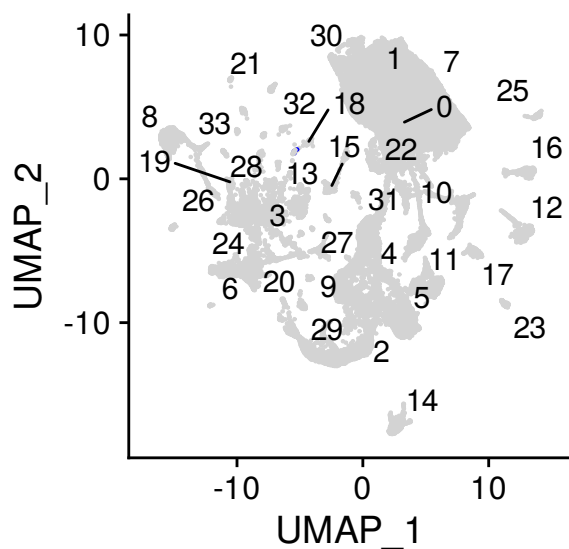

AVH is AVJ's neighbor neuron.
Putative AVH cluster 18_1 is next to
AVJ (cluster 18_0)

hlh-34 isn't significant by Seurat but
there's very little expression in
general. Seems to have more "dots"
in cluster 18_1 (putative AVH)
